

## Plastock® Antimicrobial Conveyor Chain

### ADVANTANGES:

- Tecaform AH SAN uses a silver system which is very stable
- Continuous distribution of active component on material surface
- Cleaning, minor abrasion and part wear of the surface will continuously renew the antimicrobial effect
- Reduced formation of bacteria in **HARD TO CLEAN AREAS** of the chain once installed on the equipment.
- Reduced bacterial contamination during machine downtime
- Reduced formation of odor and biofilm (commonly known as scum or mildew) on the chain link surface
- Serves as a back-up in the case of inadequate cleaning
- Reduced discoloration/corrosion caused by microbes
- No migration of the active component Non Toxic
- No thermal damage in usual operating temp. up to 100° C.
- Material components of Tecaform AH SAN are FDA compliant.

Mechanical, chemical and sterilization cleaning reduce the amount of microbes. The remaining microbes are decreased by the antimicrobial effect.

Typical performance of antimicrobial surfaces on bacteria

**Meat & Poultry**  
**Beverage/Bottling**  
**Pharmaceutical**  
**Baking**  
**Packaging Companies**
